

## Introducing the New British Made Product Infrared Heating Panel from the Eco Heating Company

With over 30 years of engineering design experience by our supplier, their engineers are experts in the field of Infrared heating and have come up with a range of heating products which mix elegant design with extremely efficient operation. The products include ceiling, wall and floor mountings. They also have a unique product for under desk heating. All of the panels have the option for printing a digital image making for a beautiful addition to living or office spaces.

The panels are manufactured in the UK at our suppliers factory in the Midlands and the design is officially registered with the Intellectual Property Office.

### Best in Class?

#### *Far Infrared*

By delivering the following benefits, far infrared is the future in heating:

- Heats objects, not the air
- Does not dry out the air; Great for allergy and cold sufferers
- Eliminates mould and dampness
- Warms evenly, so no hot head, cold feet syndrome

#### *Sleek Look*

The panels have no frame as they are made using high quality aluminium giving a very rigid panel. The unique reverse bevel means that the panels have a sleek, modern, almost floating appearance.

# MADE IN BRITAIN

## *Installation & Maintenance*

*The* panels are easy to install and require ZERO maintenance. It is no wonder that infrared heating is fast becoming the preferred choice for heating.

## *Saves Energy*

By not continuously heating the air and by delivering heating only when and where it is required, our Infrared Heater Panels typically **need less than half the energy** used by a comparable convection heating products.

How **GREEN** is that?

## *Performance*

The unique panel design uses a high emissivity, high conductive stainless steel heating plate and multi-tiered insulation to minimise heat output from the back of the panel. These all work to maximise infrared output resulting in **more radiant efficient heating**. The design is also optimised to ensure that the panels reach their operating temperature extremely quickly.

## *Quality*

Made in the UK using robust components, the heaters have quality built in and are guaranteed for **10 years** but are expected to last a lifetime.

### *Value*

Not only will these heaters cut your heating costs more than competing heaters, they are competitively priced for an aluminium frameless panel the **pricing** means they will cost you less. The end result is an exceptional return on investment.

## The Product Line from Eco Heating

We have an expanding range of models. Currently we have the following standard panels for ceiling or wall mounting;

### *Standard Panels in white*

- 160W @ 295x595mm
- 320W @ 295x1195mm
- 320W @ 595x595mm
- 480W @ 895x595mm
- 640W @ 1195x595mm

### *Under Desk Heater:*

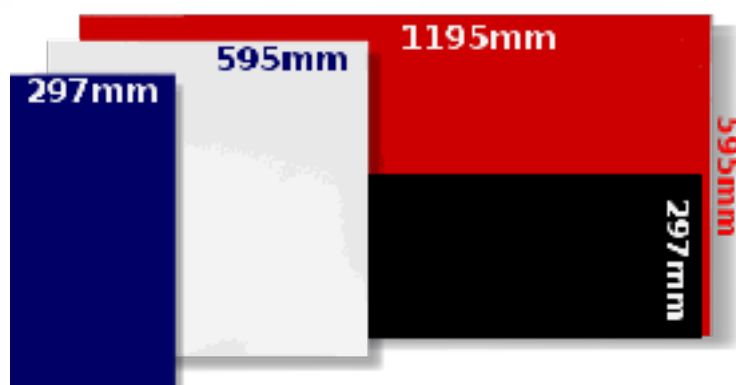

160W 295x595mm under desk including heating bracket

### *Coloured Panels*

All of the above sizes can be supplied in any colour although this will involve a slight increase in lead time and price.

## *Printed Panels*

All of the above panels can be produced with a high quality print of the customer's favourite picture. Digital image specs can be provided.

The examples below show for printed panels in an office environment.

*Additional items*

Floor stands can be provided. These offer excellent mobile heating options;
